An Overview
Basic Search to find an author’s work

A name alone is of very little use.

Combining it with other known information can help.
Advanced Search to find an author’s work

Use field tags, Boolean operators, parentheses, and query sets to create your query. Results will appear in the Search History table at the bottom of the page. (Learn more about Advanced Search)

Example: TS=(nanotub* AND carbon) NOT AU=Smalley RE #1 NOT #2 more examples | view the tutorial

AU=Jones j and OG=("Geisinger Health System" or "Duke Univ") and SU=("General & Internal Medicine" or "Medical Laboratory Technology")

Author name

Organisation Enhanced

Research Area
What is Author disambiguation?

Name ambiguity is a frequently encountered problem in the scholarly community:

- Different researchers publish under the same name.
- Individual researchers publish under many names.
- Languages and cultural naming conventions introduce additional challenges.

Author disambiguation is a process that aims to find all publications that belong to a given author and distinguish them from publications of other authors who share the same name.

FACT: A mere hundred surnames still make up over 85% of China's 1.3 billion citizens. The top three—Wang, Li, and Zhang—cover more than 20% of the population.

Also published as:
- Avram Noam Chomsky
- N. Chomsky
- نعوم تشومسك ي
- نوم حومسكي

Image: Muhammad Imran with name variations and multiple authors sharing the same name.
What drives the need for author profiling systems?

**INDIVIDUALS**
- Learn (e.g. get familiar with someone else’s work)
- Find mentors
- Vet collaborators
- Gain exposure, build a career
- Own their scholarly identity

**RESEARCH PRODUCING INSTITUTIONS**
- Showcase faculty expertise
  - Attract the attention of funders, industry, and media
  - Demonstrate ROI to the public
  - Promote collaboration across departments
- Recruit the “best” candidates
- See and assess the research activity that is occurring within.

**RESEARCH FUNDERS**
- Recruit grant reviewers
- Identify subject matter experts for board/advisory positions
- Vet the publications record of grant applicants

**SCHOLARLY PUBLISHERS**
- Recruit manuscript reviewers
- Vet the publications record of submitting authors
- Identify & vet editors/editorial board members

**DISCOVERY**
**EVALUATION**

Librarians support all of these stakeholders, and often bear the burden of wrestling with ambiguous author data in systems.
A Timeline: Identifiers to Profiles

Pioneering the way...

With ResearcherID, we pioneered the concept of assigning a unique identifier for authors that could work across systems.

2007

With ResearcherID, we pioneered the concept of assigning a unique identifier for authors that could work across systems.

2007

2012

Web of Science Group has supported ORCID from the beginning, even prior to its launch. The concept, code, and some of the original funding for ORCID came from ResearcherID back in 2011.

2013

2019

We have always integrated with ORCiD... now with Publons, researchers can effortlessly keep their ORCiD up to date by simply updating their Publons profile – as the Publons profile offers so much more.

We are investing in the Web of Science ResearcherID across our solutions to keep publications synchronised across the Web of Science Group’s suite of solutions: Web of Science, InCites, Converis, Publons and more.

NOW we’ve introduced true Author Records in Web of Science, and Web of Science ResearcherID is that unique identifier to ensure direct discovery of that author at any time.
Evolution in Author Identifiers and Profiles

A unique experience for unique author identifiers.

Web of Science and Publons each have a unique Identifying number.

Web of Science ResearcherID links the disambiguated data across systems in a bidirectional relationship.

- Creating a Publons profile will generate a Web of Science ResearcherID
- Authors can adjust which Web of Science publications are theirs in Publons and those changes are automatically reflected in Web of Science.

An easier way to manage profiles.

Update your ORCiD and corrections will automatically sync with Web of Science.

Update your Publons profile and changes can be sent to ORCiD - or -
Update your ORCiD and changes can be sent to Publons.
We are all trying to get to better data.

Let’s get there together.

Author data, made better together.

Author disambiguation at scale needs an algorithmic approach + human curation

Deliver a true Author Record via intuitive Author Search in Web of Science

Allow for users to provide feedback; authors to claim and curate their record via Publons

Feedback is reviewed by a team of specialists - Accepted feedback will improve our disambiguation algorithm

Continuously improve author disambiguation

Author profiles are core
Features and Functionality
It all begins with a simple, fast and intuitive Author Search

A new Author Search quickly and efficiently guides users through the process of easily locating the author you are looking for. Regardless of how common their name is.

Saving users time, while improving the ease and accuracy of finding authors’ full publication records in Web of Science Core Collection...

Search by Author with type-ahead functionality

Search by Web of Science ResearcherID or ORCID
Your search experience automatically adjusts depending on the level of name ambiguity

 Completely unique names will take you straight to the author record.

 Moderately ambiguous names take you to a results screen where you can select the correct record or merge records into one author view.

 Highly ambiguous names will intuitively guide users to further refine their search (as shown) before going to the results page.

 Our disambiguation algorithm uses more than 40 indicators to group together publications likely authored by the same person into an Author Record.

Author Search includes wildcard (e.g., 'Joseph Wilson' returns 'Joseph A.P. Wilson'
Institution filter uses Org Enhanced (e.g., Amity Univ, Amity Univ Gurgaon consolidated under Amity University.

... but it’s where the search takes you that’s even more exciting ...
The authors indexed in Web of Science Core Collection haven’t changed, but how you find, interact with, and manage their publication record has...

What is an Author Record?

A clean and comprehensive picture of an author’s Web of Science Core Collection publication and citation record.
Same Authors. New View.

Author Record (BETA)

See the person, rather than just a list of publications.

Author name (most recent)

Alternate name variants

Affiliations (most recent)

List of publications – (including the ability to view as a set of results to export, and analyze with links to full text).

Web of Science Citation Network view

• H-index
• Sum of Times Cited
• Total Citing Articles (total in the WoS core collection, not just in their subscription)
A new seamless curation process gives users the ability to submit feedback to improve Author Records and persistently correct publication records.

Authors can now **claim** ownership and maintain their Web of Science Author Record via Publons.

Any Web of Science registered user can submit feedback to correct an **Unclaimed** Author Record.

Everyone benefits from corrections made by the research community.
A mutually manual curation process...

Feedback isn’t just going into a computer...

All submitted feedback is being reviewed by a real human! Because if you are taking the time to suggest improvements, we want to make sure they are validated and implemented correctly.

... the algorithm learns from your feedback.

Our advanced clustering algorithm uses artificial intelligence to learn from user feedback and will continuously improve the accuracy of author disambiguation.

Author data, made better together
Giving authors ownership of their Web of Science publication record

While anyone signed into Web of Science can suggest feedback on an author’s record...

...only one person (the Author) can CLAIM ownership of their record.

When they click CLAIM THIS RECORD they will be taken to Publons, to sign into their existing profile (which will already have a Web of Science ResearcherID), or to create a profile, (in which case, a unique Web of Science ResearcherID is created).

This Web of Science ResearcherID will display in both Web of Science and Publons.
Once claimed by the author this is clearly indicated in the Author Record and nobody except the author can make corrections.

The option to CLAIM THIS RECORD is no longer available.

A link to the author’s Publons profile is provided.

If the Author Record needs updating, the author does this from their Publons profile.

Any changes are synchronised to Web of Science and ORCiD.
Researchers can own their identity

Once in Publons Author’s can manage their Web of Science Author Record, any corrections are fed back into Web of Science and ORCiD.

Publons is a true profile. Not just an author profile, but a comprehensive researcher profile, containing bio, publications, reviews and editorial involvement.

Researchers can track their publications, citation metrics and benchmark their peer review activity.

So far >350,000 Author Records have been ‘Claimed’. The more there are, the easier it will be to identify publications by an individual. So if you have not done yours yet, please do so 😊.
Easy to add publications to your Publons profile

- Import publications directly from Web of Science via your Private Dashboard.

- For other sources, import publications from ORCiD, DOI/title search, or by file upload. *

- Validate which publications are yours and add them to your profile.

* Whenever a publication is added to your profile, we automatically search Web of Science and CrossRef for additional metadata to improve your records and find any missing citations.
Claim your publications from Web of Science

Claim your publications directly from Web of Science and export to your Publons profile.

Note: If you have a pop-up blocker, you will need to disable this to be able to claim your publications from within Web of Science.
Publons links with ORCiD

- Login to Publons with ORCiD.
- One click import publications from ORCiD to Publons profile.
- One click export publication and review records from Publons to ORCiD.
- The option to automatically keep ORCiD Works and Publons Publications in sync.
- Reviews can be automatically exported to ORCID if you require.
Publons CV – highlight your work

- Individual Evaluations.
- Visas to work abroad as an Outstanding Researcher.
- Promotion, job, funding and grant applications.
- Continuing Education.

Workflows/Scenarios
Claiming your publications in the Web of Science

Manage your publications in the Web of Science

Signed into your Publons profile after 15 April 2019?

Have you imported your publications from WoS?

Do you have an ORCID?

Do you have a RID?

Find your Author Record in WoS and claim it by creating a Publons account

Create a Publons profile and import your publications from ORCID.

A Publons profile has been created for you. Find your profile and activate it.

Use the import tool to claim your publications

Your WoS Author Record should appear as claimed and you're all set!

Navigate to WoS and find your author record and claim it. Or search for you author record from WoS.

Claim your publications from WoS.

If you have an ORCID, link it to your Publons profile.

New Publons profiles will have a three character prefix in their RID, not one.
“I am a librarian and I want to correct an Author Record”

- After searching for the author’s name, either open a single Author Record or select multiple records that contain publications by the same person and click ‘View Combined Record’

- On the Author Record screen, click ‘Correct this record’, sign in to WoS, and proceed to the curation page.

- Select which publications which are not authored by the researcher to remove them from the record.

- You can remove publications in bulk by name and journal title.

This can only be done if the Author Record(s) have not been claimed.

- Submit your changes, detailing any additional information in the free text provided.

- You will receive email notification confirming your corrections, and another when they have been reviewed by our editorial team (aim within 48 hours).

- If your feedback is accepted, changes to WoS will be visible in up to 3 days.

- If your feedback is rejected, a reason will be given and opportunity to escalate to our support team.
“I am an author with publications in Publons from an ‘old’ RID/ORCID (same name)”

- I search WoS for my published name variants
- My Author Record displays my associated RID (linkable to Publons).
- My Author Record may contain other algorithmically-added publications.
- The record is not yet ‘claimed’

- I ‘claim’ the record in Publons.
- I select the publications that are mine.
- This submits feedback to WoS (i.e., these are mine, these are not mine)
- My list of publications in Publons updates to include any newly added publications.

- My WoS Author Record is ‘claimed’
- No-one else can claim it
- The publications list matches Publons*
- The Author Record shows as ‘claimed’ immediately but any changes to the record (add/remove publications) may not show for ~48 hours.

*Publons does not currently import some types of publication (e.g., corrections) therefore the numbers may sometimes not match.
"I am an author with publications in Publons from an ‘old’ RID/ORCID (different name)"

- I search WoS for my published name variants
- My Author Record displays without an associated RID.*
- The record is unclaimed.
- The publications list is augmented (by DAIS)

*DAIS has been unable to match the RID name to any names of the authorships with those publications.

- I ‘claim’ the record in Publons.
- I select the publications that are mine.
- This submits feedback to WoS (i.e., these are mine, these are not mine)
- My list of publications in Publons updates to include any newly added publications.

- My WoS Author Record is ‘claimed’
- No-one else can claim it
- The publications list matches Publons*
- My RID is now associated with the authorships of those publications.
- The Author Record shows as ‘claimed’ immediately but any changes to the record (add/remove publications) may not show for ~48 hours.
- My RID displays on my Author Record.

*Publons does not currently import some types of publication (e.g., corrections) therefore the numbers may sometimes not match.
"I am a new user importing my publications to Publons"

Profile details
- Full Name: Phil Reimann

Please add any alternative publishing names in the box below to help us match you to your articles. Any additional names can be separated with semicolons; *.
- Alternative publishing names: P. Reimann

Results: Selected 8 of 16 publications
- I select the publications that are mine.
- This submits feedback to WoS (i.e., these are mine, these are not mine)
- My list of publications in Publons updates to include any newly added publications.
- My WoS Author Record is ‘claimed’
- No-one else can claim it
- The publications list matches Publons*
- The Author Record shows as ‘claimed’ immediately but any changes to the record (add/remove publications) may not show for ~48 hours.

*Publons does not currently import some types of publication (e.g., corrections) therefore the numbers may sometimes not match
“I am a new user claiming my record on Web of Science”

- I navigate to Author Search in Web of Science Core Collection
- I search for my published names
- I select any records that look like they contain my publications.

- I click ‘claim this record’
- I get taken to Publons, where I create a new account.

- I select which publications are mine from the list (I can filter out publications by year, organization and name).
- I click to import the publications.
- (After ~24 hrs) My WoS Author Record is ‘claimed’
- No-one else can claim it
- The publications list matches Publons*

*Publons does not currently import some types of publication (e.g., corrections) therefore the numbers may sometimes not match
Now and Next...

- ~1000 researchers claim their Author Record each day
- ~350,000 claimed Author Records in the Web of Science Core Collection.
- 25+ million Author Records

In addition to claims, we are also receiving between 250 and 300 curations per day, each one being reviewed by our in-house curation team before being accepted or rejected and incorporated back into Web of Science. [Report issues to: wosg.support@clarivate.com]

Our author data is improving every day as a result.

New releases
- Extended search logic to include wildcard matches
- Improved performance for hyphenated names
- Improved navigation between pages
- Improved filtering with OrgEnhanced names

What next?
- Internationalization and accessibility commitments
- Integration with InCites
- Develop the ability for researchers and administrators to correct claimed records and process bulk record data where they have it available
- Optimize the claims process
- Deliver workflows that make it easy for researchers to keep their claimed records up to date
- Identify improvements to the DAIS
FAQ

Why have we released it as a beta?
Whilst we are confident that the Author Search functionality will offer high levels of accuracy to the user from day one, releasing it in beta will allow us to gauge user response and set expectations around timelines for processing as yet unknown levels of feedback about the author records.

How accurate is the cluster quality?
We're investing heavily to continually improve DAIS but no algorithm is ever going to be 100% accurate, which is why we offer two pathways to suggesting amendments to the records: (i) by claiming a record through Publons, or (ii) submitting feedback through WoS. All amendments we receive will feed back into DAIS to improve its accuracy further.

How long will it take for submitted feedback to show up in Web of Science?
During the beta phase this will largely depend on the quantity and complexity of the feedback we receive, but users can expect to see their corrections visible in the WoS records within 1-2 weeks. We will be continually improving and streamlining this workflow as we progress.
FAQ

What if you had a RID before Author Records was launched?
All of those individuals that previously held a ResearcherID still have them and they remain unchanged. They will be managed via Publons.

What if you did not have a RID before the launch?
Now, any author that claims their WoS Author Record via Publons will be receive a RID, and any researcher creating a Publons account and importing their WoS publications will get a RID.

Who has a RID in the future? When?
The end goal will be to automatically give every author in the Web of Science Core Collection a RID, creating a unique identifier for every individual author in Web of Science Core Collection.

What happens when claiming on Publons? What does this look like and how does it impact my record?
In Publons, users can choose to import their publications by performing a WoS search from within the Publons interface and confirming which of the records it finds are theirs. Publons shares this data back with WoS so the records are reflected the same in both places.
FAQ

When can a claimed record change? What happens when there’s a new publication that an author hasn’t yet claimed?

Researchers can find and claim their new publications to add to their claimed Author Record by using the WoS search tool in Publons. New publications will NOT be automatically added to claimed Author Records, and will instead form a separate author record until the author claims them in their claimed Author Record.

Can I make suggestions to a claimed record?

In this phase, no changes can be made to an author record once it has been claimed by the author.

Will a user be able to suggest feedback after an author has already claimed their record?

NO. Currently, no one will be able to suggest feedback on claimed records, but we will monitor and take feedback from market to address any concerns going forward.

Why does a Publons profile not match the Author Search results?

If the name in the Author Search is not the same as the one used for the Publons Profile, this can cause issues in this Beta release. This mismatch in names effects the Author Search too. When using RID or ORCID results will only be returned if the name in Publons matches what the Author Record uses.

Author data, made better together

PHILIP REIMANN, SENIOR PRODUCT MANAGER, WEB OF SCIENCE GROUP
OCTOBER 9, 2019

The Web of Science Group introduces a collaborative approach to improving researcher identity and disambiguation.

The increasingly global approach to research presents unique challenges. Researchers must establish a research identity for their contribution to their field to be recognized – all while competing for funding and positions and establishing valuable collaborative relationships. The Web of Science Group has designed the latest Web of Science™ release – a new Author Search, Author Record and challenges faced by the research community.
